

ABSTRACT

A connector, comprising a connector body (11) having a flange (19), a shell (17) forming a contour part, and a reinforcement member (53). The reinforcement member (53) further comprises a reinforcement part (67) in contact with the flange (19) in which screw holes (57) are formed and an engagement part (65) engaged with the shell (17). The reinforcement member (53) is detachably fitted to the connector body (11).
